1. Introduction

Objectives:

To gather feedback from the UAE businesses and eInvoicing Service Providers on the proposed elements of the UAE eInvoicing Framework, aiming to create a shared understanding of the requirements and help businesses start planning for eInvoicing adoption:

- **The eInvoicing Data Dictionary (PINT AE):** This document outlines the key data elements (fields) and their attributes for the most commonly used invoice types by businesses in the UAE. It highlights the importance of standardization to ensure consistency across different document types, which is essential for smooth integration and processing of eInvoices within the business ecosystem
- **Excluded Transaction:** A Business Transaction for which there is no eInvoicing exchange and reporting requirement,

Specifically, this consultation seeks to:

- Establish a common understanding of data elements used in eInvoices across business communities
- Understand the practical requirements of businesses, and in the process, identify any gaps or additional data fields necessary for operational, regulatory, or analytical purposes
- Obtain diverse perspectives, including from industry experts, accounting firms, and eInvoicing Service Providers, to create a holistic and widely accepted electronic invoicing framework.

It is important to note that eInvoicing will be rolled out in a phased manner. In this regard, a comprehensive rollout strategy would be developed and communicated to the business community in due course.

2. Background

One of the four pillars underpinning the “We the UAE 2031” vision is the Forward Ecosystem, an imperative to enhance government performance, continue to strengthen the UAE’s digital infrastructure and its development according to the latest technological methods.

One such initiative that has been approved by the UAE Cabinet is the eInvoicing Program. The UAE eInvoicing program in the UAE also reflects a global trend in this regard (i.e. the adoption of Digital Reporting Requirements (DRR) generally, and Continuous Transactions Controls (CTC) more specifically), and offers the opportunity to deliver a number of key domestic imperatives aligned with We the UAE 2031 vision, namely:

- **VAT compliance:** Maximize compliance, tackle the shadow economy, and shrink the tax gap.
- **Effectiveness:** Increase transparency and improve audits with a view to encouraging a long-term culture of compliance.

- **Taxpayer experience:** Enhance taxpayer and user experiences, potentially offering new and innovative engagements.
- **Digitalization:** Reduce human intervention in certain business and tax reporting processes with a view to making the UAE and its fiscal ecosystem more digitally enabled.
- **Efficiency:** Optimize cost and core operations, reduce processing time and encourage a reduction in paper wastage with a view to helping meet sustainability objectives.
- **Economic contribution:** Contribute to the growth and competitiveness of the economy and utilize big data.
- **Contribute for policy making and government interventions:** By adopting eInvoicing, UAE government will have access to the relevant data in near real-time which will help in providing deep insights to policy makers for identifying areas and sectors that need government support and assistance.

For the business community, eInvoicing will enhance ease of doing business, promote fair competition, streamline VAT refund mechanism, reduce compliance burden, pre-fill VAT fields (as practical as possible) and provide environment for near real-time exchange of digitalized document such as invoices.

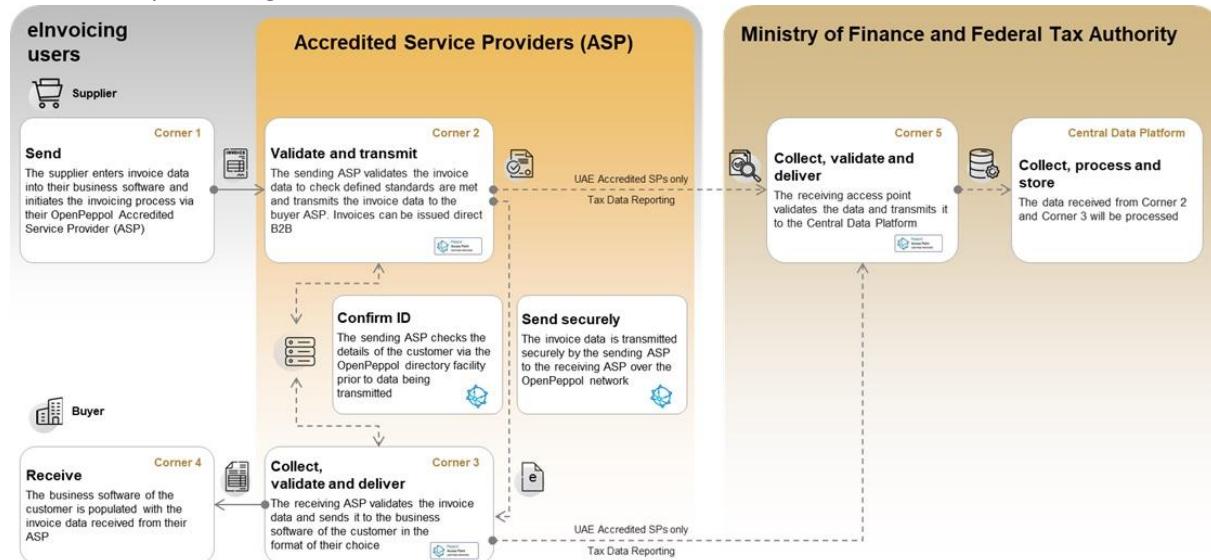

In countries that have already implemented eInvoicing, businesses over a period of time, have benefited from the overall reduction in the cost of invoice processing.

More information on the UAE eInvoicing can be found www.mof.gov.ae/einvoicing

3. UAE eInvoicing framework

eInvoicing requirements apply not only to taxable persons, but also to all businesses operating in the UAE, regardless of their VAT registration status. The UAE has adopted a Decentralized Continuous Transaction Control and Exchange (DCTCE) model which is a modern approach to electronic invoicing that leverages decentralized technologies to enhance the efficiency, security, and transparency of

transaction processing.

1. Supplier (Corner 1) submits eInvoice data (PINT AE) in an agreed format with its UAE Accredited Service Provider (Corner 2)
2. C2 validates the eInvoice data received from C1 and converts it into the UAE standard eInvoice xml format (if C2 has received the eInvoice in a different format from C1).
3. C2 transmits the eInvoice (in the xml format) to the Buyer's UAE accredited Service Provider (Corner 3)
4. In parallel, C2 reports the Tax Data Document (TDD) to Corner 5
5. Upon validating the eInvoice, C3 sends a Message Level Status (MLS) to C2
6. C3 submits the eInvoice to the Buyer (Corner 4) in an agreed format with its UAE Accredited Service Provider (Corner 3)
7. Upon successful validation of the eInvoice, C3 also reports the Tax Data Document (TDD) to Corner 5. If the validation of the eInvoice was unsuccessful, C3 reports a negative MLS to C2 as well as to C5. In this scenario, there will be no reporting of the TDD to C5 by C3
8. C5 sends a Message Level Status (MLS) to C2 once the TDD has been successfully reported
9. C5 sends a Message Level Status (MLS) to C3 once the TDD has been successfully reported
10. C2 forwards the C3 exchange MLS and C5 reporting MLS to C1.
11. C3 forwards the C5 reporting MLS to C4.

4. Overview of the Data Dictionary (PINT AE)

The Data Dictionary is a critical component underpinning the entire eInvoicing ecosystem. In simple terms, it is a structured and standardized catalog of all the data elements used in the process of generating, exchanging, processing and reporting an eInvoice (which for these purposes includes the tax invoice, tax credit note, self-billing and other invoicing scenarios). It serves as a foundational reference

for businesses, software developers, and regulatory bodies to ensure consistency, interoperability, and compliance in eInvoicing systems.

a. Typical use cases using the Data Dictionary

The most common use cases for generating an invoice/credit note in the UAE (i.e. the instances where a tax invoice/tax credit note is required to be issued or needs to be generated and retained) have been captured in the table below. Note that the table identifies which of the Appendices to this document you will find the relevant use case Data Dictionary fields.

Use case	Description	Details
1	UAE Standard tax invoice	Mandatory and commonly used optional fields
2	Supply under Reverse charge mechanism	Additional requirements beyond use case 1
3	Zero rated supplies	Additional requirements beyond use case 1
4	Deemed supply	Additional requirements beyond use case 1
5	Disclosed agent billing	Additional requirements beyond use case 1
6	Summary tax invoice	Additional requirements beyond use case 1
7	Continuous supplies	Additional requirements beyond use case 1
8	Supply involving free trade zone	Additional requirements beyond use case 1
9	Supply through e-commerce	Additional requirements beyond use case 1
10	Exports	Additional requirements beyond use case 1
11	Margin scheme	Additional requirements beyond use case 1
12	Standard tax credit note	Mandatory and commonly used optional fields
13	Disclosed agent billing tax credit note	Additional requirements beyond use case 12
14	Commercial Invoice	Mandatory and commonly used optional fields
15	Self-billing	Mandatory and commonly used optional fields
16	Self-billing tax credit note	Mandatory and commonly used optional fields

b. Explanation of the Use Cases

Each use case is presented as a table of mandatory fields meaning that each field must be completed/contain a value in order to be valid. Note that there are more optional fields contained in the full version of the Data Dictionary but for presentational purposes only the mandatory and conditional mandatory fields have been shown.

ID	Business Term	UAE PINT Cardinality	Definition	Shared Rules Description	Aligned/Distinct Rules Description	Standard Tax invoice
IBT-001	Invoice number	1..1	A unique identification of the Invoice.	[ibr-002]-An Invoice MUST have an Invoice number (ibt-001).		M

The below table provides a brief explanation of each of the columns of the Use Cases in the appendix of this document

Column	Column Name	Description
1.	ID	"The ID of Business terms (i.e. a field on an eInvoice) IBT-XXX means the term is part of global specifications BTUAE-XX means the term is specific to UAE specifications"
2.	Business Term	Name of the business term i.e. the field name. These are the individual pieces of information required in an eInvoice, such as invoice number, invoice date, buyer details, seller details, tax rates, and payment details. Each data element has a unique identifier and description to eliminate ambiguity.
3.	UAE PINT Cardinality	"The cardinality of the business term 0..1 or 0..n - data field is not mandatorily required, but if present there can be one (0..1) or more occurrences (0..n) 1..1 or 1..n - data field must be present and there can be one (1..1) or more occurrences (1..n)"
4.	Definition	Each Business Term is defined with its purpose, meaning, and use case. For example: <ul style="list-style-type: none"> • Invoice Number: A unique identifier assigned to the invoice to distinguish it from others. • Tax Identification Number: A unique identifier for the buyer or seller for tax reporting purposes.
5.	Shared Rules Description	Business rules or specifications that govern the structure of the eInvoice exchanged between parties. These rules ensure data integrity, such as permissible value ranges or specific patterns (e.g., email formats or tax identification structures).
6.	Aligned/Distinct Rules Description	Business rules or specifications that govern the structure of the eInvoice exchanged between parties which are specific for the UAE. Identifies dependencies and relationships between business terms, such as linking line-item totals to the invoice grand total.
7.	Use Case specific Business Term applicability guidelines	These business terms for the corresponding use case, are applicable when issuing a tax invoice, or to any other invoice related to exempt or out of scope supplies, as per the UAE VAT law : <p>M (Mandatory) : This indicates that a field is Mandatory for the issuer.</p> <p>O (Optional) : This indicates that a field is Optional for the issuer.</p> <p>C (Conditional) : This indicates that a field might become Mandatory depending on the presence of other fields. Please note that otherwise such fields are Optional."</p>

Item description

Note – 16 highlighted fields which are mandatory as per UAE PINT and currently not covered in UAE VAT Law

Total mandatory fields for Standard Tax Invoice: 49

5. Stakeholder key areas

The consultation seeks targeted feedback from stakeholders to refine the eInvoicing Data Dictionary document. The key areas of focus are:

a. **Comprehensiveness:** Are all required fields included?

The Data Dictionary encompasses all the essential fields necessary to support the end-to-end eInvoicing process. Comprehensiveness ensures that:

- Core data elements are covered: This includes fundamental fields like invoice number, date, buyer and seller details, item descriptions, tax information, payment terms, and totals.
- General use cases are addressed: For instance, whether the dictionary accounts for discounts, surcharges, multi-currency transactions, or other nuanced scenarios.
- Stakeholder perspectives are incorporated: Feedback is critical to identify any missing fields that might be required by businesses, software vendors, or tax authorities.

Considerations for Stakeholders:

- In the data dictionary, are there any fields missing for your specific business?
- Are there any conflicts / issues with the existing fields in the data dictionary?
- Are industry-specific data elements adequately represented?
- HSN (HS Code) and service codes are proposed to be initially optional fields on an invoice but they will become mandatory at a later stages of the eInvoicing programme. How many digits of HSN (HS Code) and service codes, do you feel would be comfortable/practical to report with your transactions – 4, 6 or 8 digits?
- Do you foresee any potential problems in reporting any specific transactions via the eInvoicing exchange e.g. from a practicality or privacy perspective?

b. **Clarity:** Are data element definitions clear and unambiguous?

Clarity in the Data Dictionary ensures that every stakeholder—regardless of technical expertise—understands what each field represents and how it is used. Each data element has a clear, concise description that eliminates ambiguity. For example, defining "Invoice Date" explicitly as the date the invoice was issued, not the date it was created or sent.

Considerations for Stakeholders:

- Are there any fields or terms you find confusing or open to multiple interpretations?

6. Next steps

• **Consultation Timeline:**
